As part of the Long Island Sound Study’s ongoing water quality monitoring program, IEC started its 29th consecutive summer of weekly ambient monitoring surveys in western Long Island Sound and the upper East River on Tuesday, June 25th, 2019

Throughout summer 2019, IEC staff will perform 12 weekly surveys to each of 22 stations in the far western Long Island Sound to assess seasonal hypoxic conditions. Hypoxia occurs when dissolved oxygen (“DO”) concentrations become low. Marine organisms need oxygen to live, and low oxygen concentrations can have serious consequences for a marine ecosystem. The 12 surveys include weekly *in situ* measurements of water temperature, salinity, dissolved oxygen, pH, and Secchi disk depth. Measurements at each station will be taken one meter below the surface, at mid-depth, and one meter above the bottom. 6 of the 12 surveys will include collection of additional samples for parameters relevant to hypoxia at 11 of the 22 stations (stations listed in **bold** on table, upper right). These samples will be analyzed for nutrients, Biochemical Oxygen Demand (BOD), Total Suspended Solids (TSS), and chlorophyll *a*, in addition to the suite of *in situ* parameters listed above.

Nutrient parameters that will be analyzed include Ammonia, Nitrate+Nitrite, Particulate Nitrogen, Orthophosphate/DIP, Total Dissolved Phosphorus, Particulate Phosphorus, Dissolved Organic Carbon, Particulate Carbon, Dissolved Silica, and Biogenic Silica.

Proposed Summer Schedule		
Date	Survey Number	Parameters
6/25/2019	1	<i>In situ</i> , nutrients, chlorophyll a, BOD, TSS
7/2/2019	2	<i>In situ</i>
7/9/2019	3	<i>In situ</i> , nutrients, chlorophyll a, BOD, TSS
7/16/2019	4	<i>In situ</i>
7/23/2019	5	<i>In situ</i> , nutrients, chlorophyll a, BOD, TSS
7/30/2019	6	<i>In situ</i>
8/6/2019	7	<i>In situ</i> , nutrients, chlorophyll a, BOD, TSS
8/13/2019	8	<i>In situ</i>
8/20/2019	9	<i>In situ</i> , nutrients, chlorophyll a, BOD, TSS
8/27/2019	10	<i>In situ</i>
9/3/2019	11	<i>In situ</i> , nutrients, chlorophyll a, BOD, TSS
9/10/2019	12	<i>In situ</i>

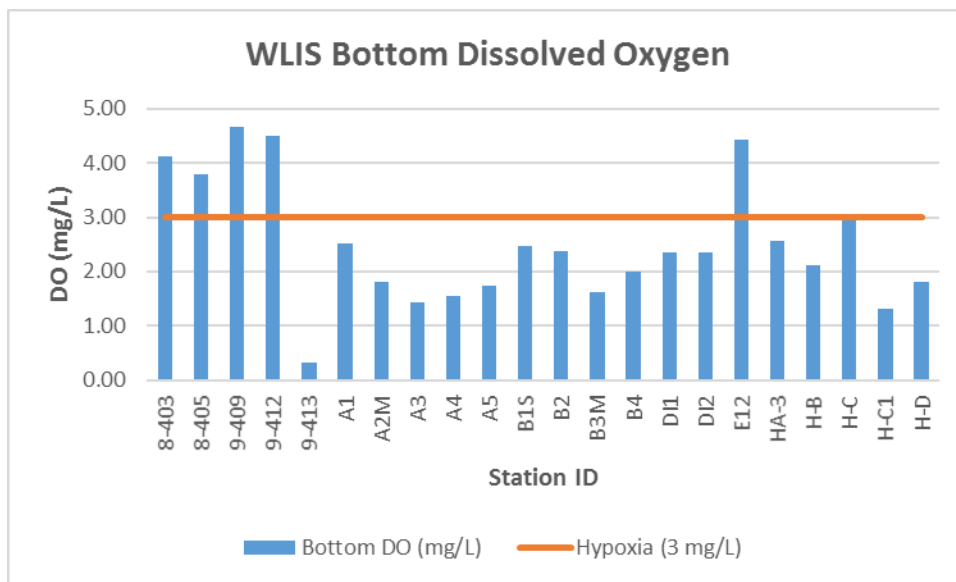

SURVEY # 9 AT A GLANCE

Hypoxia (DO <3.00 mg/L)	Bottom: 9-413, A1, A2M, A3, A4, A5, B1S, B2, B3M, B4, D1, D2, HA-3, H-B, H-C1, H-D Surface: 9-413
Lowest Surface DO concentration	2.90 mg/L (Station 9-413)
Lowest bottom DO concentration	0.33 mg/L (Station 9-413)
Average surface DO concentration	5.45 mg/L
Average bottom DO concentration	2.49 mg/L
Average surface water temperature	24.45°C
Average bottom water temperature	23.00°C
Average water column ΔT	1.46°C
Average surface salinity	25.61 ppt
Average bottom salinity	26.25 ppt

Survey 9 Narrative Summary

The 9th weekly summer survey took place on Thursday, August 22nd, 2019. Monitoring began at 06:04 and ended at 09:17, with high tide at 04:29 as per the NOAA tide table at New Rochelle. 16 stations exhibited hypoxia at the bottom. One stations (9-413) exhibited hypoxia at the surface. Atmospheric temperatures during the time of the survey ranged between 78°F and 83°F. Secchi disk measurements ranged from 3.0 feet in Manhasset Bay to 6.5 feet at A1 (Whitestone Bridge). The weather conditions were partly sunny during the survey, with a calm (ripples) sea state throughout the survey area. LaGuardia airport reported **0.35"** precipitation during the 48- hour period prior to the start of the survey, all of which occurred within 24 hours of the start of the survey. No precipitation occurred during the survey.

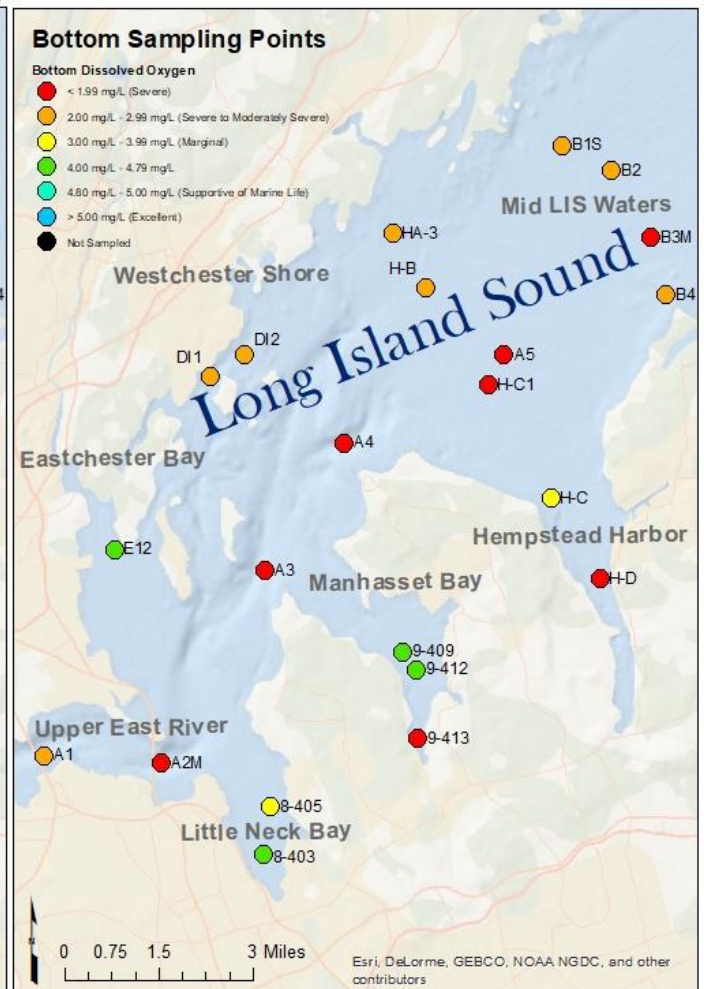

The Long Island Sound Study defines hypoxia as DO values which are below a concentration of 3.00 mg/L.
